

Permanent Zirconia teeth set

Permanent Acrylic PMMA teeth set

Made from hard, rock-solid zirconia

Biomimetic, with natural-looking edges. It doesn't stain

Provides strength, durability and aesthetic

An ideal choice for anyone looking for a natural, long-lasting smile that is indistinguishable from real teeth

permanent zirconia teeth

Made from acrylic resin with nano-ceramic incorporation

Maintains a natural look, but it is subject to aging over time

There is a usual tendency to replace this teeth set within 3-4 years because its lifespan is shorter and its appearance becomes less vibrant over time

A quick, cost-effective option for now, with the flexibility to replace it down the road

permanent acrylic teeth

Conclusion: Which is better?

- Zirconia, if quality and long lasting durability on your top priorities.
- Acrylic, if budget is your main concern and replacing it in 3-4 years isn't an issue.

About the Acrylic PMMA

Picture taken while delivering the upper acrylic teeth set

Around 3 years later, staining and edge wear are visible across all teeth due to opposing jaw friction

This picture shows the lower acrylic teeth set being fitted. As for the upper jaw, where a similar set was placed roughly 5 years ago, it shows the effects of long-term wear, which are now evident. This is not the case with the zirconia teeth set.
